There's no compiling, no configuration, and no installation involved. Basically, you fire up the program and click the "Convert" button to get started. It actually works as advertised, with some fairly straightforward features to work with. At the bottom, you have your options for conversion, and a button to export content, for example. Clicking either of them takes you to an Export settings window. As with most such windows, these are a little sparse. You'll find the ability to choose how the content is saved in one pane, while converting settings are in another. As you'd expect, you can check a bunch of boxes to allow file attachments to be included, and check the box next to the selected file to remove any watermarks. You also find the option to password-protect the resulting file, among other security measures. At the end of it all, you can save the converted file to a local or network folder, or export the files to a variety of formats. The latter is a little easier to use. To be honest, for a program like this, it's a bit disappointing that the Export settings are so sparse. Everything else works perfectly, but it would have been nice to see more options in there. Maybe if there were more settings to work with, the tool could be a bit more useful to use. The program does support batch conversion, but you'll need to manually check the batch box in the main window before you start. There's no way to run a whole folder through the application. A Need for Imperfection - happyscrappy ===== bitL I don't have any perfect, flawless experience, but I can make _interesting_ experience. The key word there is "interesting", that's what matters. And you should make your "perfect" experience special, it will be remembered. ---- elvirs I agree with you. You see sometimes I start creating something as I see a pattern on paper and while I'm doing it I just stop when I run out of the pattern or it feels complete enough and I know it's not perfect I just sometimes see new things on the way and I don't know what it is and why I'm making it but it's perfectly fine in that case because I'm not trying to make it perfect or have a guide for me I just try my best to express what I'm trying to make I'm not very good with drawing because it's too complicated for me but I'm starting to think of a pattern and it's a good enough one for me because when I see it I just stop and sometimes I make a variation on it or something completely different but it's perfectly fine in that case as I'm not trying to make it perfect and have a guide for me. I'm just trying to express myself. I hope you get what I'm trying to say ---- gridlockd > "It's perfectly fine in that case because I'm not trying to make it perfect" That's very sensible. > "I'm not very good with drawing because it's too complicated for me" I'm not good with mathematics, but I'd still rather deal with a big formula than a bunch of steps. ---- andrewfhr Interesting perspective. It's a shame that they make themselves look like idiots though, and that it's difficult to parse what's saying
